

# Saudi Arabia

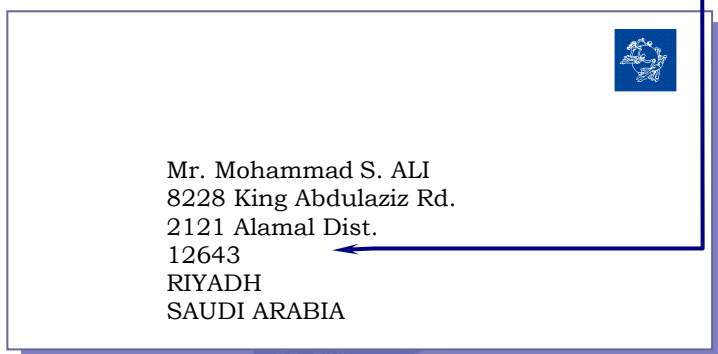

Saudi Arabia uses two postcode systems for:

- Home delivery as described in the first position
- P.O. Box delivery as described in the second position

## Postcode

## Postcode position

5 digits above the locality name in both systems.

## Coding method for home Delivery

5 digits above the locality name

**1 2 2 3 3**

## Coding method for PO Box delivery

5 digits above the locality name

**1 1 5 6 4**

## Position of the address on the envelope

Bottom right-hand corner

## Alignment of address lines

Left-aligned

## Saudi Arabia (cont.)

- Address format** Address structure for home delivery:
- line 1: addressee
  - line 2: short address (optional)
  - line 3: building number followed by street name
  - line 4: additional information: unit number or office number or letter box number (optional line)
  - line 5: additional number to the left of the district (optional)
  - line 6: postcode
  - line 7: country

Building number, postcode and the additional number used in the address for home delivery provides geographic coordinates that uniquely identify each delivery point. Thanks to this, GIS (Geographic Information System) technology can be used for efficient mail processing.

- Address structure for PO Box delivery:
- line 1: name of addressee or organization name
  - line 2: P.O. Box number
  - line 3: postcode above the name of city
  - line 4: city or locality name

A short address consists of four letters: region code, branch code, division code, unique code and a four-digit number for building and it can be optionally included in the formatted address below addressee.
