Postcode type and position
7 digits to the left of locality name.

Coding method
9414219

Addressing format
A seven digit postcode for all addresses in Israel was introduced in 2013. In smaller localities one single seven digit postcode covers the entire locality. Bigger localities are divided along streets and neighbourhoods. For apartment building, the street number should appear first and then the apartment number, separated by “/”. The addressing format is the same for the all territory of Israel (urban and rural areas alike).
