

# Nicaragua

## Postcode

## Postcode type and position

7 digits on the line before the municipality name, with a dash between the 3rd and 4th digits and between the 6th and 7th digits.

## Coding method

At present, the postcode system used in Nicaragua consists of seven digits, as presented above. It will be noted that this postcode does not contain coding above district level. Sorting by department and/or municipality is performed manually, on the basis of the department and municipality names.

However, in preparation for the future mechanization of sorting, a new postcode system has been designed and developed to allow the inclusion of coding for the department and municipality. So, for the above example, the full postcode, comprising 11 digits, will be XXYY-050-008-4, where XX is the department code and YY the locality code. Until automated sorting is introduced, however, only the last seven digits of the full code will be used.

## Example

Sr. Juan Manuel Nurinda  
Del Hotel Granada 1c. arriba 75 vrs. alsur.  
Reparto Santa Isabel  
050-008-4  
GRANADA, GRANADA  
NICARAGUA

*addressee name*  
*traditional address*  
*district name*  
*postcode*  
*municipality name, department name*

## List of departments

Boaco	Madriz
Carazo	Managua
Chinandega	Masaya
Chontales	Matagalpa
