

# Saudi Arabia

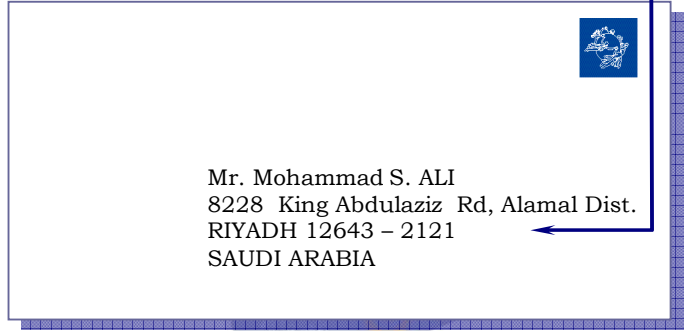

Saudi Arabia uses two postcode systems for:

- Home delivery as described in the first position.
- P.O. Box delivery as described in the second position.

**Postcode**

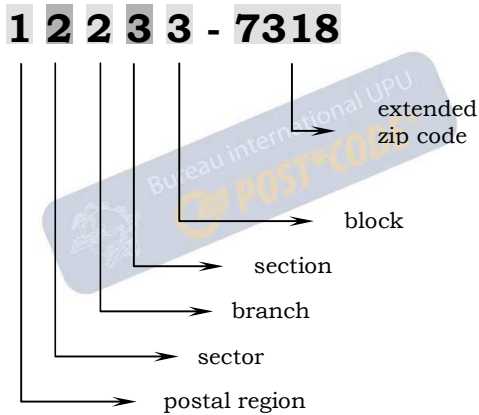

**Postcode position**

to the right of the locality name in both systems

**Coding method for home Delivery**

5 digits to the right of the locality followed by 4 digits giving additional building information, separated by a dash.

**Coding method for PO Box delivery**

5 digits to the right of the locality.

**Position of the address on the envelope**

Bottom right-hand corner

**Alignment of address lines**

Left-aligned

## Saudi Arabia (cont.)

**Address format** Address structure for home delivery:

- line 1: name of addressee or company name.
- line 2: building number followed by street name and district name.
- line 3: additional information: unit number or office number or letter box number (optional line).
- line 4: city name followed by the postcode and extension number.

The building number and street name will be separated from the district name by a comma. The postcode must be separated from the extension number by a dash.

Building number, postcode and the postcode extension used in the address for home delivery provide geographic coordinates that uniquely identify each delivery point. Thanks to this, GIS (Geographic Information System) technology can be used for efficient mail processing

Address structure for PO Box delivery:

- line 1: name of addressee or company name.
- line 2: P.O. Box Number.
- line 3: name of city followed by the postcode.

The postcode appears to the left of the name of the locality when the address is written in Arabic.

### Examples

Home Delivery:

Mr. Abdullah Nasser  
3909 Abdullhamid Alkatib ST, Azahrah Dist.  
RIYADH 12987 - 7318
