In 2017, the sales of online retail goods delivered through post and express network exceed 800 billion. The number of served online shoppers increased from 160 million in 2010 to 530 million in 2017.

The average unit price of China’s parcel and express service has dropped more than half of that in 2008. Compared with unit price in 2008, more than 1 trillion of social logistics cost has been saved in the past 5 years.
China’s post and express industry lowers the threshold to online retail for SMEs and drive entrepreneurship and employment.
Post and express industry can narrow the gap between urban and rural areas, make people in remote areas share the achievements of social development, especially digital economy development, and promote inclusive development.
Post and express industry is an important way to alleviate poverty and promote inclusive development. By 2020, the online trade in rural areas is expected to reach 2 trillion yuan, producing 10 billion to 13 billion parcels.
There are 7158 new energy vehicles, occupying 3.27% of the whole industry’s vehicles. It is estimated that the driving distance of a new energy vehicle is 170 kilometers per day, saving 15 litres petro and cutting 33.75 kilogram carbon dioxide emission.
