This release is the first version of the PosTransfer mobile application. Postal operators of the Postal Payment Services User Group (PPSUG) can benefit from the publication of this app to provide their customers with the ability to prepare international cash transfers from home.

This first version of the application allows the user to:

Via the **Pre-Fill** function:

- Consult the services offered by the postal organization to transfer cash internationally
- Accurately assess the costs and services offered by the postal operator (possible destinations, fees and exchange rates)
- Pre-fill the data required (PosTransfer) for sending cash to a recipient and saving time at the counter with a short code that automatically retrieves the data.

Via the My **PosTransfers** function:

- Retrieve the pre-filled information and code allocated for each PosTransfer they created
- Resend the information if no Internet connection was available at the time of pre-filling.

Via the **More function**:

- View legal information (privacy, terms & conditions), application details and support contacts.

English and French localization

The application integrates with postal payment services API (ReferenceAPI, BAMS, UPU-IP EAP API).
